

High-level entry points, core boundary, and external integration points (<10 sec comprehension)

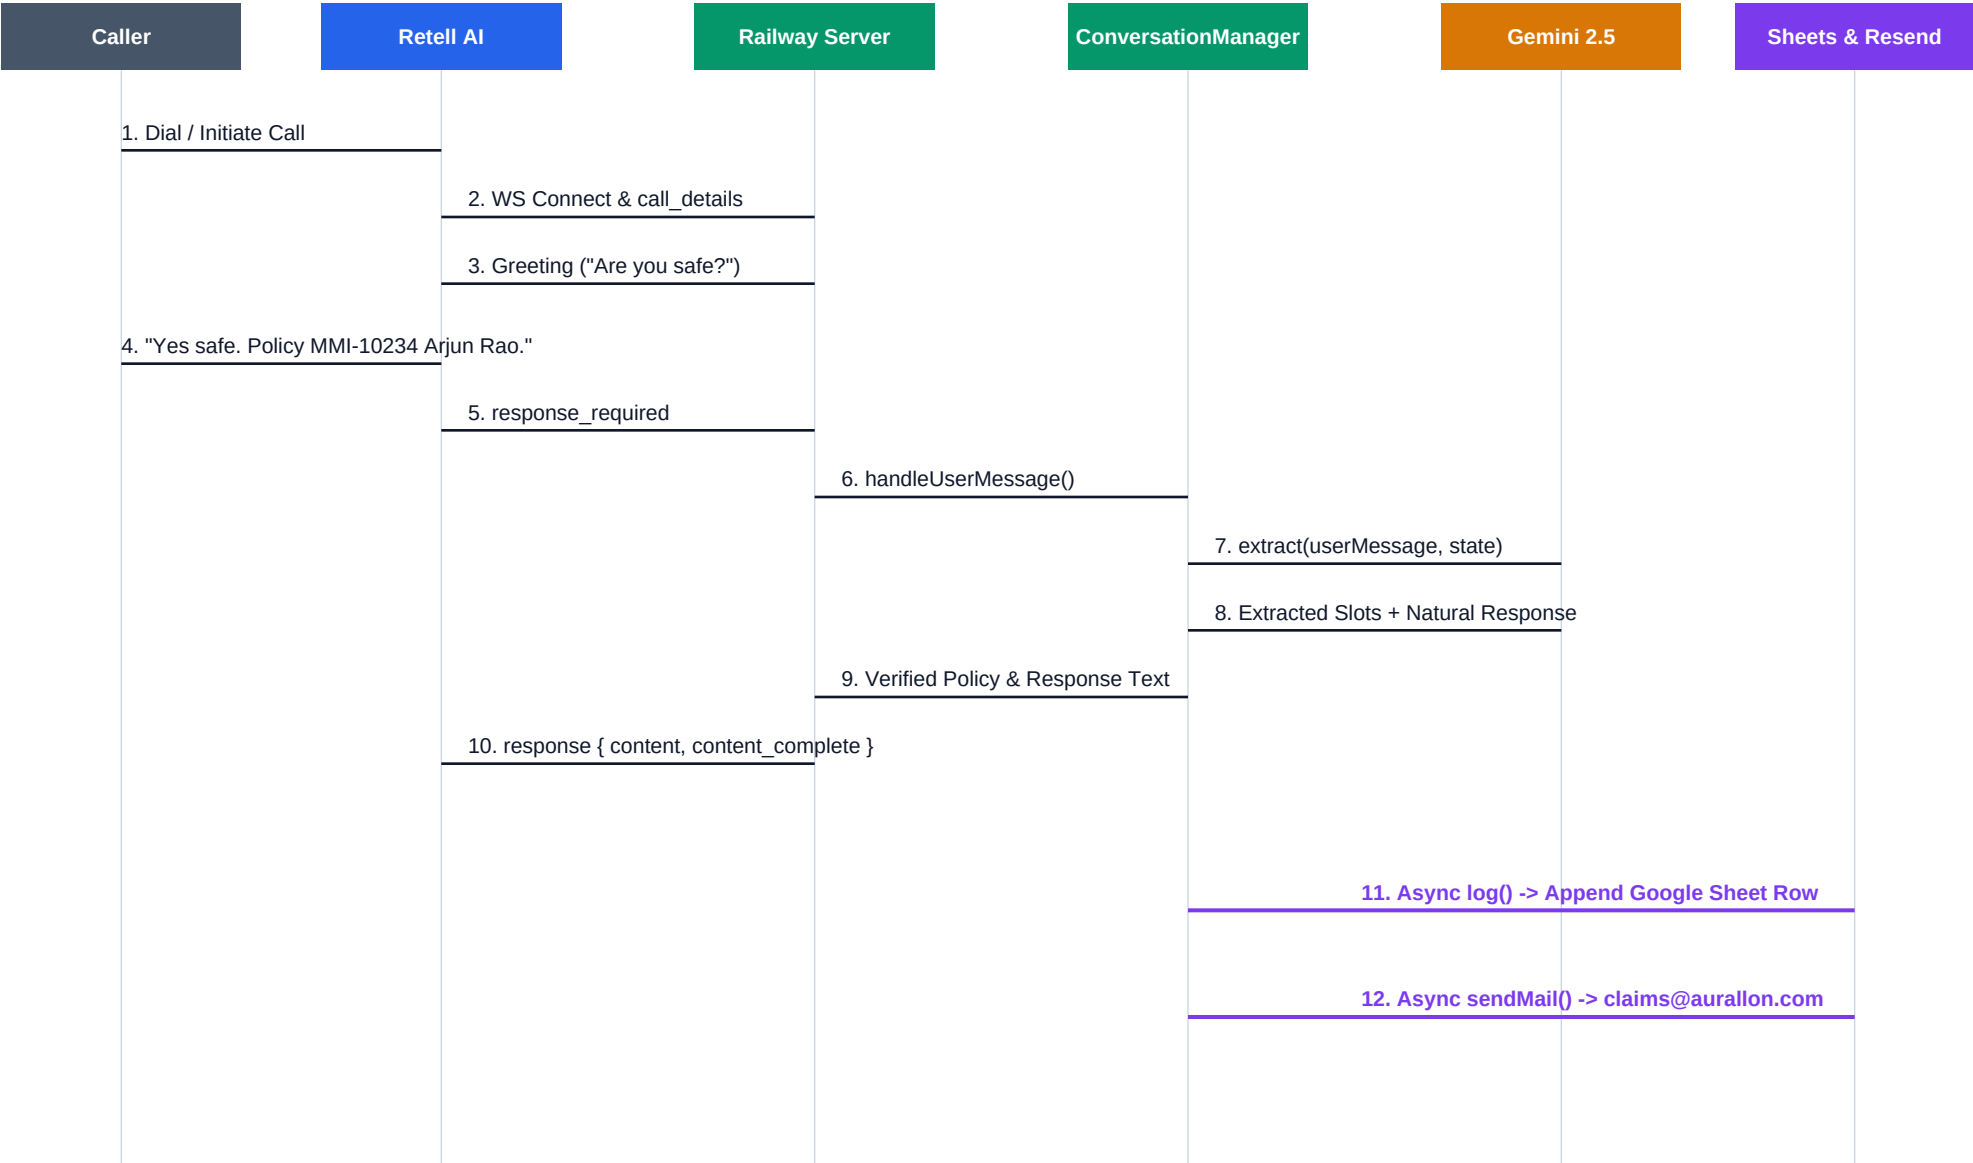

Subsystem containers inside the FNOL Voice Agent Railway deployment boundary

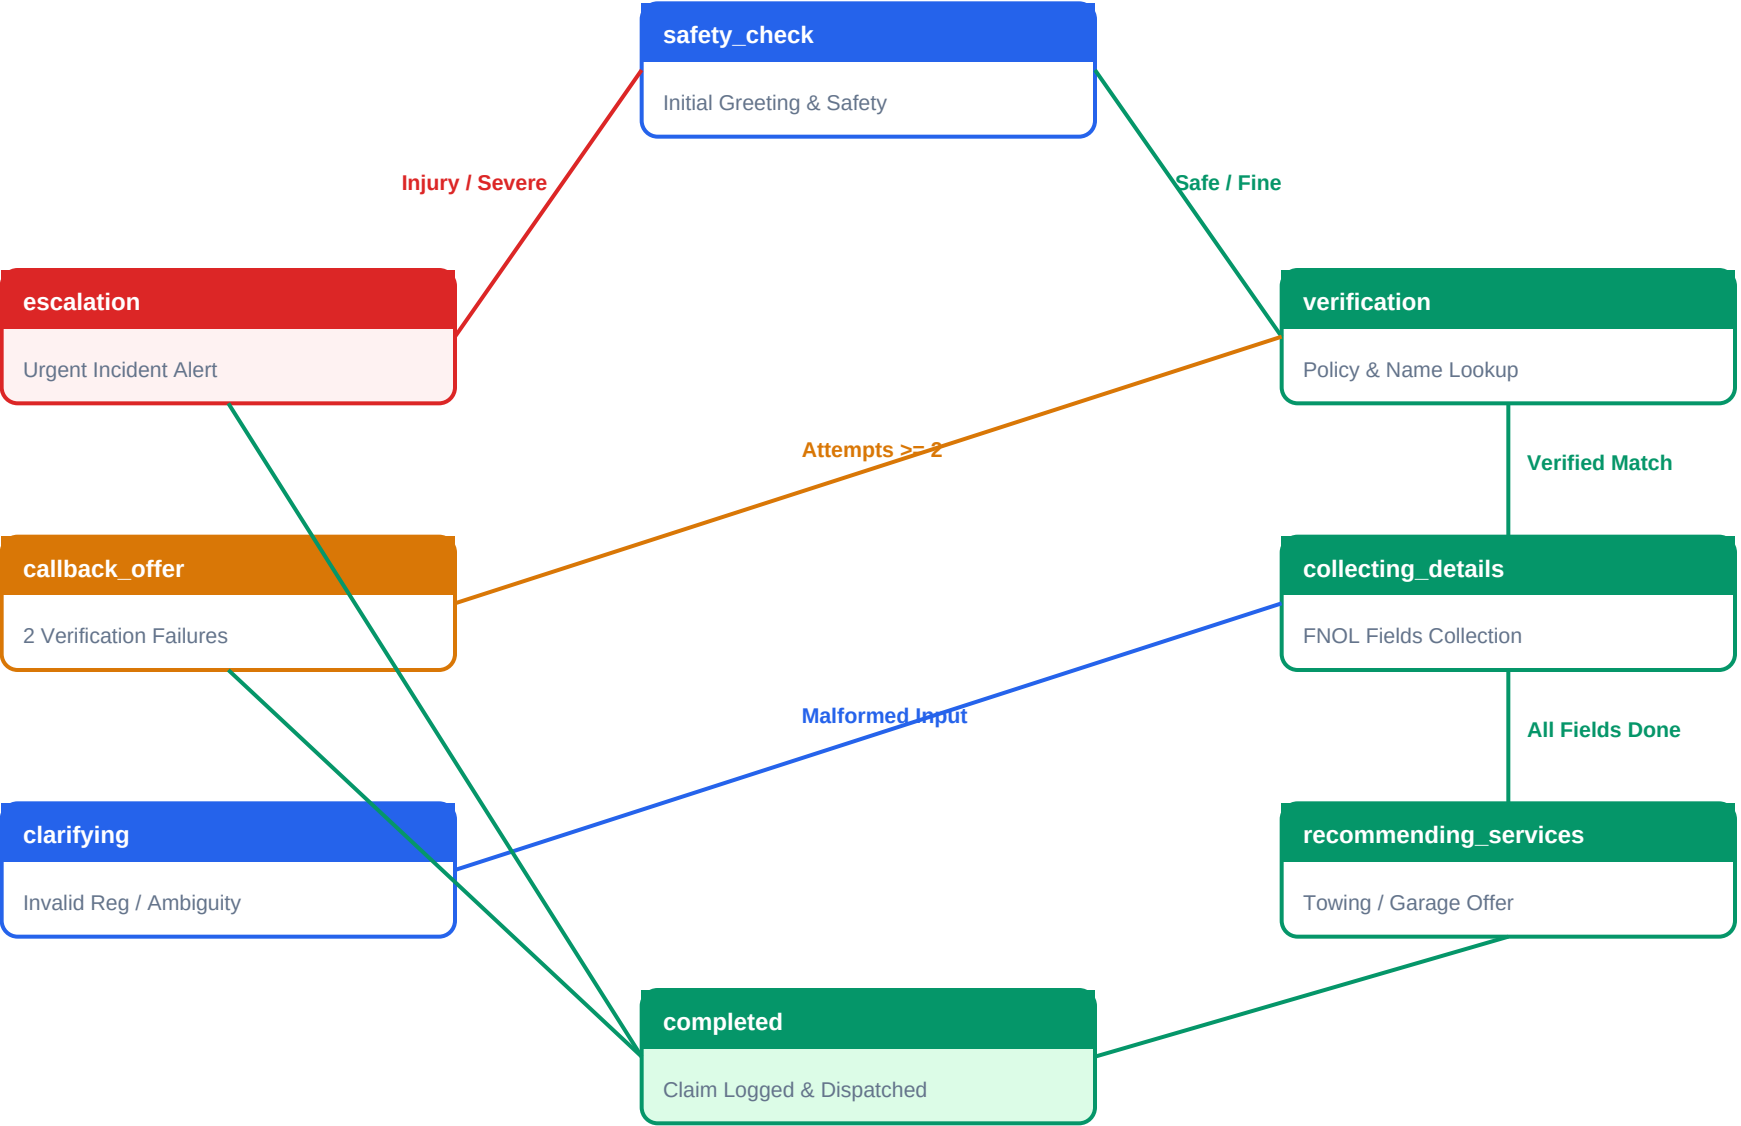

Modular services composing the ConversationManager domain orchestration engine

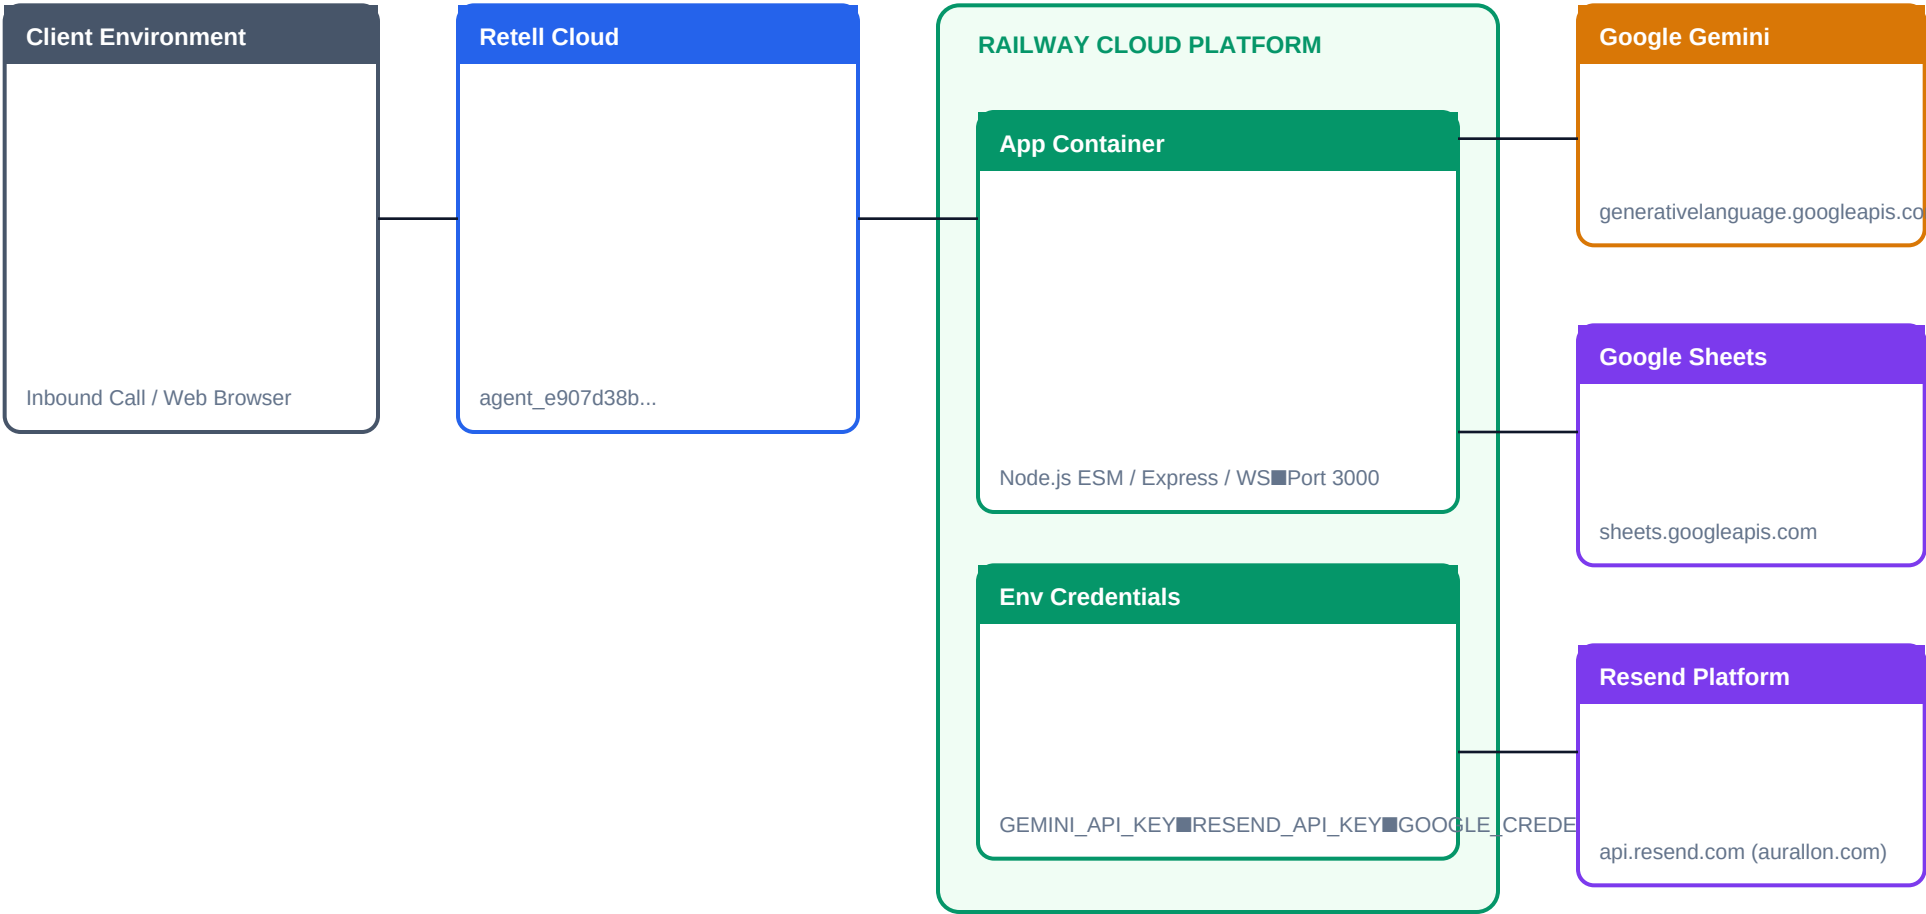

Synchronous voice interaction flow & non-blocking asynchronous persistence dispatch

Deterministic state transitions, retry limits, escalation paths, and completion gates

Infrastructure nodes, container boundaries, environment credentials, and network ports

Step-by-step data schema transformations from raw audio transcript to persistent records
